"I don't know." And probably you don't care, but you should. A piece of string is tossed away in contempt a thousand times per day, and nobody seems to realize that its manufacture is one of the most curious things that machinery is put to. Let's have a little talk about it. It is a cotton string, you see, and we must begin with

As far South as Georgia and Alabama cotton seed is in the ground by the last of February, and never later than the first week in March. It is drilled in the same as wheat, and soon after the plant is up a force of negroes called "choppers" are set to work. "Chopping cotton" means going along the rows with a hoe and cutting or chopping out the extra plants. If left as they come up they would be too crowded. Later on the plants must be hoed like corn, and it is same as wheat, and soon after the plant Fall before the boll opens and shows the clean, snow-white cotton. There are from two to four or five pickings, according to the arrength of the crop. Right here is where the hardest part of the work comes in. Negroes with sacks slung over their shoulders take the field row by row and, with a twist of the fingers which few

white men can imitate, snatch the cotton from the boll. They must work in a stooping posture, and go where you will in the cotton States, you can tell an old cotton picker by his walk on the streets. Your string has been planted, "chopped," hoed and gathered. Millions of dollars have been invested, thousands of people given work, and millions again are to be realized. New, then, the cotton index be gimed, to take the seeds and dirt ont. The cotton-gin houses of the South represent hundreds of thousands of

dollars more. Then it must be pressed, sacked and hooped, and you have the ordinary bale of cotton weighing, say, 500 phonds! Now Withe colton is to be used at home, the ordinary bales are loaded into wagons of carts, and drawn to the nearest town. You see them come in by six mule teams, by four, by two, and now and then one drives into town people were devising some plan to yoke

one squeeze, the bale becomes almost as to fits bearing on the consideration as to its bearing on the future of the country.—Savannah News. Three bales can be squeezed into one by the compress, and 1,500 pounds will stow in the place of 500.

And now I have not mentioned the

inspecting, grading, weighing, buying, rehooping and shipping, all of which give employment to thousands more and cause millions of dollars to change hands. That bit of string begins to have more value in your eyes, eh! Well, let's see.

We go into the Enterprise Cotton Mill

We go into the Enterprise As you stand at the at Augusta, Ga. As you stand at the door a moment let me tell you that the lions of dollars again, and that Genius has fairly exhausted herself in inventing the machinery—machinery so near the machinery—machiner cotton mills of America represent milhuman that you almost expect to hear it call out to you. We first go into the picking room. Here the cotton, just as it comes from the plantation, is fed into machines called pickers. They remove any refuse and blow the dust out. From any refuse and blow the dust out. From any refuse and blow the dust out. From come from your long, long roving, On life's sea so bleak and rough, Come to me, tender and loving the pickers the cotton goes to the finishlap—or a great white roll of coarse cotton batting. It is then fed through another machine and comes out in rolls again, which are called finishers' laps. It is much whiter and softer than before. It is much whiter and softer than before. It is more ways and softer than before ways are ways are ways and softer than before ways are ways are ways are ways and softer than before ways are ways are ways are ways and softer than before ways are ways are ways and softer than before ways are ways are ways and softer than before ways are ways are ways are ways and softer than before ways are ways are ways are ways are ways are ways are ways and ways are is wound off on to great spools, and when these spools are full they are wheeled into the carding room. This room is 240 feet long by seventy-five wide, and the per day. The stuff wound off on our

spools is not string, but a soft, tender

rope the size of a chair round. Our spools now go the railways in what are called "drawings." The four ropes are there merged into one, and run out into the cylinders called railway cases. Then sixteen of the ropes are merged into four and run over a drawframe. Then four go over another frame and become one. Then the cans are ranged alongside of a machine called a "sweater," and the ends of the drawings or ropes are run up to spindles and rewound. This time the rope is about half the size of a clothes line; and is called "roping." They go from this to the one. It is then ready to go to the spin-ning room on the third floor and be spun on bobbins. The rope has now been reduced to the size of No. 40 thread. That is finer than our string; but let me go on. The bobbin goes to the spooling department and is there run off on to spools. One spool will hold all that can be wound upon ten bobbins. The spools go to the warping frames, there being 380 separate spools and 380 separate threads, each of which must be attached to the warping beam. The thread must be carried through a hot air chest and sized before ready for the web. The threads then have to be picked into a this work handles 1,900 separate threads twice over in about an hour. When the threads are finally, in "harness" and drawn they are ready for the loom, and each girl attends to four looms. When you enter the weaving room you hear a great clashing and clanking and every-thing seems in confusion. But come up to this loom. It is weaving the cloth which you may yet wear for a shirt. See the perfection of movement! Everything is timed to the fiftieth part of a second. One shuttle down-one up. Here is an eccentric-there is a crank-there a shoulder—here a motion so nearly human that you start back in surprise. In looking over five yards of factory cloth you will find at least one rough spot-something like a knot. That is caused by the breaking of one of the threads. An alarm is rung, and the girl's deft fingers tie the ends in a second.

the great tank for making the starch by all indiscriminate excoriation. Rememsteam. On every floor we hear the machines humming, see every employee at he deserves just as much condolence as work. You see every one in his place. Every machine is doing its duty. In this seeming hurly-burly is the grandest sysiem of order. They know to a pound how much raw cotton is used in a dayhow many yards are woven-who has been absent or present-how much money goes for profit or loss.

Nothing but a bit of string! Well, my lad, it may be of no use to you just now, but don't throw such things aside without thought. Outside of all the millions of money, acres of land and thousands of people employed in the cot-ton industry, think of the years of patient study which have been given to the machinery. If it is not human, it is at least perfection. Scores of men have worried themselves to insanity; scores of others have experimented to have their ideas stolen, and who can say how many have spent days and nights without grasping the hoped for problem? You throw the string away without a thought of this. That was just like a boy, and just like four men out of five; but it is almost criminal. It is the every day things of our life-our pins, needles, thread, marbles, gimlets, screws, knives, tacks and other seeming trifles-which have puzzled the genius of the world most to pro-

- Now it is understood that Congress | human make. will not adjourn until late in July.

Plowing by Steam or Electricity.

Steam plows have been in use for several years in England, Egypt and some parts of the United States. Heretofore the only steam plow that has given satisfaction is one arranged to be drawn by an engine stationed at the side of the field by means of a wire rope. There are many objections to this plan, and hundreds of experiments have been made to demonstrate the practicability of plowing with a traction engine.

Heretofore these experiments have not produced satisfactory results; but now the wheat growers of Dakota are beginning to use a traction engine plow that was detected in selling for money certain bids far to supersede horse power for turning prairie sod. An engine drawing a gang of eight plows has been intro-duced into the Territory, and its average work is the breaking of twenty-five acres per day, turning the sod four inches

Fuel being scarce and costly in Da-kota, the cost of breaking the land by steam is said to be one dollar per acre. Of course that leaves a good margin of profit for the towner of the plow. The cost of breaking the land by animal power is three dollars per acre, as it requires four horses or oxen, one man and a boy to operate one plow, which will That break only a little more than an acre a story.

Mo steam plow has yet been constructed, however, to meet the requirements of small farmers. There has long been a great demand for such a machine. Some twenty years ago Horace Greely dedicated the book which demonstrated how little he knew about farming to the man who should invent a steam plow. It would appear that its construction would not be a very difficult matter, but no one has ever yet claimed the dedication.

The rapid development of the electrical science suggests before many years electricity, rather than steam, will be looked to by farmers for motive power to draw their plows and reagons and propel all their farm machinery. With the storage batteries already invented, and the utilization of the power of the wind and water courses in generating electricity, it only needs a few steps forward to adopt this mysterious force to every pur-pose where power is required. Gen. Toombs once remarked that "The niggers" and mules are eating up the country."

people were devising some plan to yoke the lightning or harness some other force in nature in their places. We might get along with the negroes very well, but the combination of the negro and the mule in our farm economy—or rather absence people were devising some plan to your the lightning or harness some other force in nature in their places. We might get along with the negroes very well, but the combination of the negroes very well, but the combination of the negroes and the mule in our farm economy—or rather absence enough to resist a cannon shot, and, at

Over a Coffin-Lid.

"She —was —a—good —wife —to —me.
A good wife, God bless her!"
The words were spoken in trembling accents over a coffin-lid. The woman asleep there had borne the heat and burden of life's long day, and no one had feet were swift on errands of mercy; the heart of her husband had trusted in her; companions deserted him, when fickle affection selfishly departed, when pleas-

"Come from your long, long roving, On life's sea so bleak and rough, Come to me, tender and loving And I shall be blest enough."

the morning that has no noon. Then she had comforted him, and sent him out whole hearted while she stayed at home and-cried. What can a woman do but

cry?—and trust?
Well, she is at rest now. But she could not die until he had promised to 'bear up," not to fret, but to remember how happy they had been. They? Yes, it is even so. For she was blest in giving, and he in receiving. It was an

equal partnership after all! "She-was-a-good-wife-to-me." Oh! man! man! Why not have told her so, when her ears were not dulled by death? Why wait to say these words over a coffin wherein lies a wasted, weary, gray-haired woman, whose eyes have so ong held that pathetic story of loss and suffering and patient yearning, which so many women's eyes reveal—to those who read. Why not have made the wilderness in her heart blossom like the rose with the prodigality of your love? Now you would give worlds-were they yours to give to see the tears of joy your words would have once caused, bejeweling the closed windows of her soul. It is

But oft to our own
The bitter tone,
Though we love our own the best. -Detroit Free Press:

Talmage's Views of the Paulc.

"There is one very mean thing about human nature," said Dr. Talmage in his Friday evening talk, "and that is the disposition to jump on a man when he is down. Ever and anon the community must have a scapegoat. At the presen time the scapegoat. At the present ime the scapegoat is Ferdinand Ward. By denoutoring him men of large experience hope to have their own foolhardiness alleviated. He has no doubt wronged others, but no more than others have wronged him. You wrong any man when you necessarily put on him temptations greater than he can bear. Put into a young man's hande \$1,000,000 belonging to other people and be satisfied with taking your three per cent. a month without asking how he gets it and you have sinned against him more than he

can ever sin against you. "Put the best phase you can on every man's misfortune. Do not call it rascality when it may have been only a mistake. Divide up among many the condemnation which you are tempted to put ...Down in the basement are the monster upon two or three. By calm faith in engine and boilers—up under the roof is God, help cool down the panic. Save if he lost it in selling dry goods or gro ceries. Be careful in your anathemas of Wall street to draw the line between those who do a legitimate businsss and those who make it the whirlpool for sucking down the fortunes of others. We hear a great deal of talk about se curities, but the only securities worthy of the name are eternal securities."

> - A child was drowned in a tub of water in Birmingham, Ala:, recently. - The Bath paper mill near Agusts was burned on Sunday. Loss \$25,000. Insured.

> - Washington men must be very stingy. At the grand receptions there, very many of the ladies wear dresses which show very plainly that the makers did not have material enough to finish hem at the top.

> - Senator Elair has introduced in the senate a bill to appropriate \$500,000 to promote the proposed exposition of the agricultural and mechanical capabilities of the colored races of the world, to be held in Chicago next year.

- Dyspepsia is cured by muscular exercise, voluntary or involuntary, and it can be cured in no other way, because nothing but exercise can create or collect gastric juice, which is a product of the man machine that nature alone can Blaine's War Record.

Here is Hon. Jas. G. Blaine's war record as given by E. F. Pillsbury, of Maine, a close neighbor of Blaine, in a speech in Boston before the Bay State Club: "He was the first to be drafted in his district. But prior to that an organization had been effected in Augusta to protect men against the draft, each member paying \$25 to the fund to hire a substitute if drafted. Mr. Blaine out of that fund hired a substitute named Bradford. A soft place was found for the man to remain at the post in Augusta instead of going to the front. After a while he certificates, and he was kept in jail until the close of the war. That constituted Mr. Blaine's service in the field. [Loud laughter.] After the war closed, the men who had been drawn claimed that the towns and cities should pay the expenses they had been put to, and Augusof Augusta to pay Mr. Blaine \$200, the amount he had paid for a substitute, and it was voted and passed and he was paid. That you can rely on as being a true

- Thirty persons were killed and seventeen wounded by the explosion of a powder mill at Pontreonolli, Italy, on

- The President and his cabinet, with the exception of Chandler are said to be not only indifferent but absolutely hostile to the Republican ticket.

- The weather in England is so ab-normally chilly and the nights so cold that fears are entertained that the growth of the crops will be seriously checked.

- A minister requested us to say for the benefit of candidates that some : of the country churches contemplate passing resolutions not to vote for any cardidate who, attending church, keeps a part of the congregation out of the house after worship has commenced.— Union Times.

— It is a significant fact that the religious press of the country is almost a unit in its opposition to Blaine. Usually the religious newspapers steer clear of politics, and a man must be indeed a hardened case, and much worse than even the ordinary run of Republican politicians, when they feel called u pon to do battle against him, and to urge all church members, regardless of party affiliations, to vote for any decent man who is brought out against him. - To all wearers of false teeth the news

of the recent fashion set by a Chicago society lady will be extremely welcome. This lady has an entire set of false upper ta generously voted to pay these men the money they had paid for substitutes, and nor pretends that they are preferable to Mr. Blaine got his bond for \$200. But real teeth. She is also near sighted, and this is not the end. Afterwards a resolution was put before the Common Council west summit of her dress a pair of near eye-glasses which she puts on whenever she wishes to look at anything. Some be the part of common sense to use her teeth only when she desired to talk or eat. Accordingly, she now carries them suspended by a cord around her neck. When she meets a friend she first puts on her eye glasses and looks at him and then puts in her teeth and indulges in conversation. Similarly, when she goes to dinner, she puts in her teeth as soon as the soup has disappeared and the fish is brought on. Being a leader of Chicago fashion, her example has been followed by other ladies, and at a Chicago opera quite a large proportion of the ladies of the audience wear their teeth gracefully suspended from the neck.

BAD, BAD, BAD BLOOD.

Some blood is bad because it is poor and weak. Some is bad because it contains impurities. Some men have such bad blood that the wonder is it does not poison the mosquitoes who come to bite them.

The rich red color of good blood is owing to the iron which is present.

Blood which has not enough iron in it is always unsatisfactory. The person in whose veins it circulates cannot be said to enjoy good health. The efforts of expert chemists to produce a preparation of iron which can be assimilated with the blood have resulted in that perfect preparation which is an important part of Brown's Iron Bitters. It is the only one which freely enters into the blood. It is the only one which accomplishes the desired good.

Weak, poor, thin blood may be made rich and strong, and impure blood may be purified by the use of that Great Iron Medicine, Brown's Iron Bitters. 3 4 4 5 - 3 8

Out of the Jaws of Death.

The gentleman who outlines his case below is a man considerably advanced in life, and is noted for his sterling integrity. His Postoffice is Yates-ville, Upson County, Ga. The following is

Mr. John Pearson's Statement : In the Spring of 1882 I was attacked with a very bad cough, which continued to grow worse until fall, when I got so weak that I could not get about. I tried a great many kinds of medicine but continued to grow worse. I was notified that I had consumption and would probably die. Dr. Holloway finally told me to try Brewer's Lung Restorer. They sent to Ward's Store and got a bottle and I commenced taking it right away. After taking two or three doses, I began to improve, and by the time I had used up one bottle I was able to get on my feet again. I am now in excellent health. I am confident that the Lung Restorer saved my life and my neighbors are of the same opinion. It is the best Lung Remedy ever made in my opinion. Dr. H. promised me that he would write to the manfacturers and tell them of the wonderful cure it made in my case.

Statement of Mr. Benj. H. Hearndon:

Early in November, 1881, while sewing on the machine, my wife was taken with a severe pain in her side, which was soon followed by hemorrhages from her lurgs and a severe cough. Fever commenced, she could neither cat or sleep, and in a few weeks she was reduced to a living skeleton. The attending physician told me that he thought one of her lungs was entirely gone. She could not retain the most delicate nourishment on her stomach. I then agreed with Dr. Sullivan, my family physician, to call Dr. Holloway in consultation. They made a final examination of the patient and pronounced the case hopeless. Dr. Holloway then suggested the Brewer's Lung Restorer as a last resort. I sent for a bottle and gave her a dose. I found that she could retain it on her stomach, and after about the third dose, I began to notice some improvement in her condition. I continued the medicine regularly, and by the time she had taken two bottles, she was able to walk about the house. She is now in better health than she has enjoyed for several years. I believe the Lung Restorer saved her life. We have a family of six children, some of them grown."

Mr. Hearndon's Postoffice is Yatesville, Upson County, Ga. He is a thoroughly reliable man in every particular.

Specific Remedies for Woman's Woes.

BRADFIELD'S FEMALE REGULATOR Is a result of a skillful and scientific combination of that special class of medicines known to act specifically on the womb and uterine organs; and is therefore a special remedy for all diseases pertaining to the womb. Its great efficacy in cases of suppressed or painful menstruation, the Whites, and Partial Prolapsus, stands unchallenged. In these cases it affords immediate relief, and permanently restores the menstrual function, and thus protects woman from a long train of disastrous consequences. As an unfailing remedy to be used during that critical period known as "Change of Life," this invaluable preparation has no rival.

PRICE.—Small size, 75c.; Large size, \$1.50.

Gem and Magnet Shirts!

This is an inestimable boon to all child-bearing women. When applied according to direction insures a safe, quick and comparatively paintess delivery. Thousands of women over the land gratefully testify to the wonderful effects of this great remedy. It not only shortens labor and lessons the intensity of pain, but, better than all, thereby greatly diminishes the danger to life of both mother and child. This great boon to sulfering woman is the substitute of both mother and child. This great boon to sulfering woman is the substitute of both mother and child.
